### **DETAILED ACTION**

This Office Action is responsive to the Amendment filed on August 31, 2009. The Applicant amended claim 1. However, the rejection is made final for the following reasons of record.

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-13, 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roberts et al., U.S. Pat. Application Pub. 2005/0112418, in view of Guthrie et al., U.S. Pat. 5,009,968.

Roberts et al., teach a fuel cell stack comprising:

a solid polymer electrolyte fuel cell stack having a stacked body formed by stacking fuel cell units together and a pair of end plates sandwiching the stacked body therebetween (abstract; 0007; 0067); electrical heaters disposed near the ends of the stacked body or the end plates, respectively (0048); and a control unit which controls the power generation operation in the solid polymer electrolyte fuel cell stack (0015; 0021). A control apparatus for a fuel cell stack according to claim 1, wherein the fuel cell stack further includes a pair of terminal plates each of which is disposed between each of the

end plate and one of the fuel cell units disposed at each end of the fuel cell stack (0007; 0048; 0067). A control apparatus for a fuel cell stack according to claim 1, wherein the control unit is adapted to execute the power generation operation in the fuel cell stack in order to supply electrical energy to the electrical heaters (0021). A control apparatus for a fuel cell stack according to claim 1, further comprising temperature sensors for measuring temperature of the fuel cell units, wherein the control unit is adapted to control the electrical heaters depending on the temperature of the fuel cell units measured by the temperature sensors (0031; 0039).

Roberts et al., do not recite control unit to operate electrical heaters.

Guthrie et al., teach electrical heaters disposed near ends of stacked body (col. 2, lines 41-48).

Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to insert the teachings of Guthrie et al., into the teachings of Roberts et al., because Guthrie et al., teach, "electric heaters may be interposed in the insulation between the membrane and the pressure plate to form a thermal guard which keeps the end cells at the required cell operating temperatures. The insulation between the heaters and the pressure plate precludes high heat rates into the end plates which would cause them to distort excessively during heat up and cool down cycles. " (col. 2, lines 41-48).

### Response to Arguments

3. Applicant's arguments filed 8/31/09 have been fully considered but they are not persuasive. Applicant argues that the prior art of record, Guthrie et al., and Roberts et

Application/Control Number: 10/658,148 Page 4

Art Unit: 1795

al., are non-analogous art. In response to applicant's argument that Roberts et al. and Guthrie et al. are nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, the control apparatus is directed to the peripheral aspects of the fuel cell system (electrical heaters, water purging device, control unit), therefore the problems of the molten carbonate fuel cell should be the same as that of a solid polymer electrolyte fuel cell, and it would be obvious to control the heaters, purging device, and control units in either type of fuel cell.

### Conclusion

- 4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Omoto et al., U.S. Pat. Application Pub. 2005/0112423 A1, teach purging in a fuel cell system when stopping operation of the power generation system. Ito et al., U.S. Pat. 5,302,471, teach electric heaters in end plates of fuel cell stack. Romanowski et al., U.S. Pat. 5,132,174, teach electric heaters adjacent to the end cells of fuel cell stack.
- 5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Page 5

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ANGELA J. MARTIN whose telephone number is (571)272-1288. The examiner can normally be reached on Monday-Friday from 10:00 am to 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dah-Wei Yuan can be reached on 571-272-1295. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
